

Pre Wiring For Foxtel

Stand Alone Residential Dwelling

Pre wiring your home during construction or renovation will ensure that Foxtel can be installed easily without the need for external cabling while providing an excellent foundation for the installation of additional home automation systems.

How To Make Your Home Foxtel Ready

1. Determine The Delivery Platform

Contact Foxtel on 131 999 to determine if the address is serviced by Cable or Satellite.

2. Pre Wire Your Home

Pre wire your home to Foxtel specifications as outlined in this guide and on the **Foxtel Website**.

3. Pre Wire Your Home

Call Foxtel on 131 999 to arrange your subscription and installation date. The technician will be able to use the installed cabling to complete the installation.

Pre Wiring For Foxtel

Stand Alone Residential Dwelling

Cabling from Home Control Hub to Wallplate

Run the following from Home Control Hub to each Wallplate:

- 2 x Foxtel approved coaxial cables (3 x if stand alone FTA)
- 2 x cat 6 cables

Please ensure that at either end of the cable runs sufficient cable is left to enable terminations.

Signal Delivery

If Satellite:

- Run 4 x Foxtel approved coaxial cable roof access to the Home Control Hub. In the roof space ensure there is adequate coaxial cable to cover the distance from the furthest point of the home (in any direction)

If Cable:

- Run 1 x Foxtel approved coaxial cable from the cable entry point to the Home Control Hub.

Cabling from Home Control Hub to Wallplate

The Control Hub is a central location for the termination of all cable runs. Typically Control Hubs are located in an easily accessible area such as the garage, under a stairwell, beside electrical switchboard or inside a closet

- Locate 1200mm ground/floor no less than 300mm from any corner or edge of the wall.
- Minimum dimensions of enclosure approx 400mm x 400mm x 90mm.
- Provision of double power point for powering amplification devices if needed.

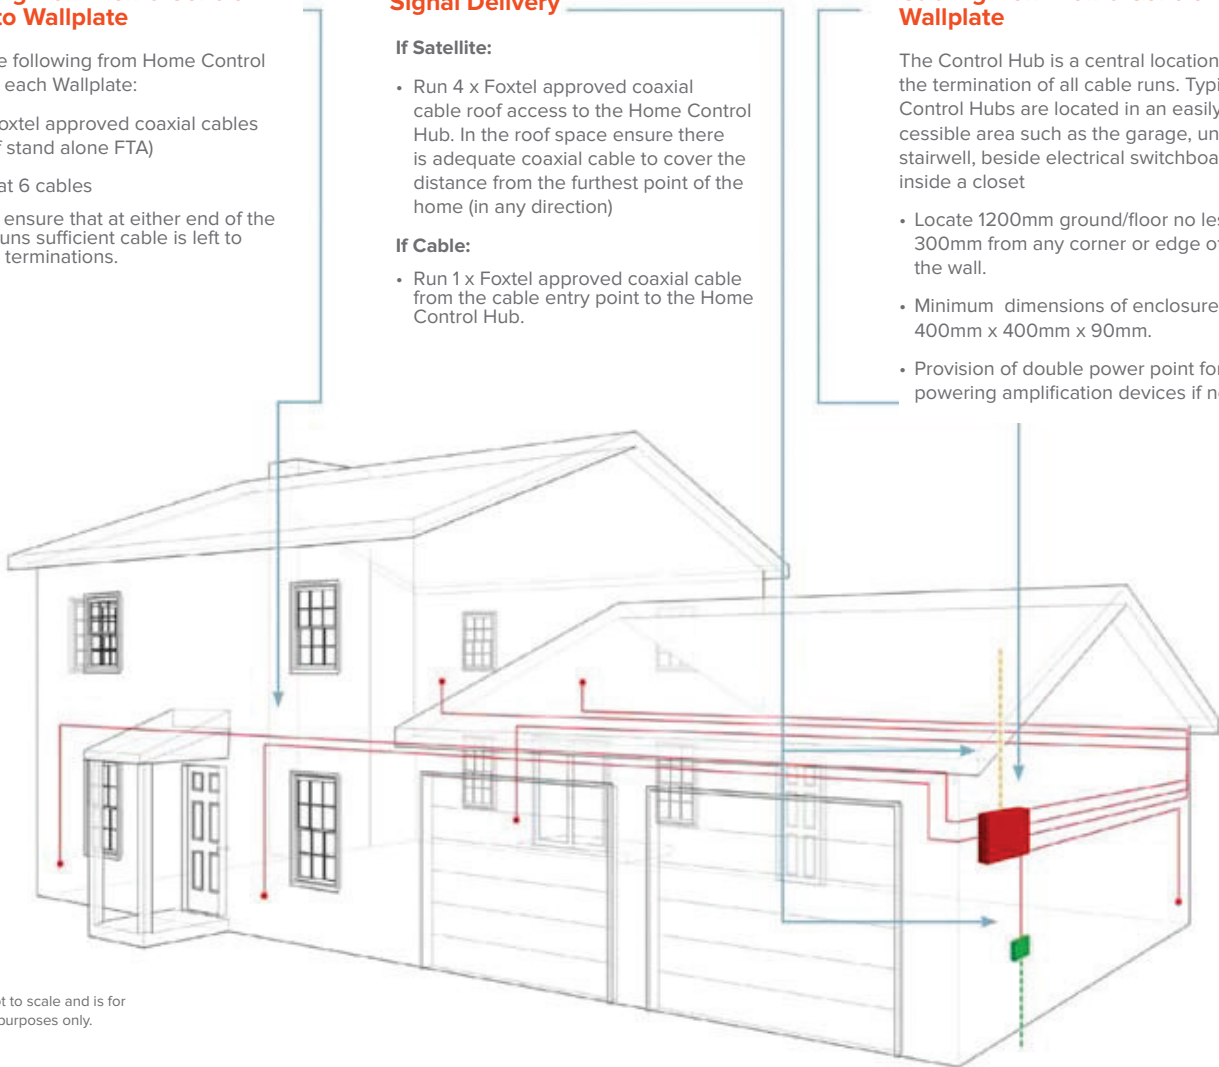

Image is not to scale and is for illustration purposes only.

Please Note:

- Each cable run must be one continuous length of cable from the wallplate to the Home Control Hub
- All parts and cabling must comply with Foxtel specifications
- All cable must be clearly labelled at each end for easy identification
- For detailed information please refer to the Foxtel Installer handbook
- Foxtel does not guarantee that these specifications will remain relevant for future Foxtel products or services
- Foxtel is not responsible and does not guarantee connection to infrastructure that does not comply with current Foxtel specifications available at Foxtel.com.au.
